

## Stitching Machine

---

### Single Head Box Stitching Solution

This stitching machine is designed for efficient box assembly operations. With a single stitching head, it provides reliable performance for corrugated box manufacturing and packaging operations.

#### Key Features

- Single head stitching operation
- Robust construction for industrial use
- Efficient stitching mechanism
- Easy operation and maintenance
- Consistent stitch quality
- Suitable for various box sizes

- Durable components for long service life

### **Applications**

Perfect for corrugated box manufacturers requiring reliable stitching capabilities. Ideal for facilities producing standard corrugated boxes and packaging materials. Suitable for small to medium-scale operations requiring quality box assembly.

---

## **Double Head Stitching Machine**

### **High-Efficiency Box Assembly System**

The Double Head Stitching Machine features two independent stitching heads for increased productivity. This configuration allows for faster box assembly while maintaining consistent quality.

### **Key Features**

- Dual stitching heads for higher productivity
- Independent head operation
- Heavy-duty construction
- Efficient box assembly workflow
- Easy adjustment and setup
- Consistent stitching performance
- Suitable for high-volume production

### **Applications**

Ideal for high-volume box manufacturing facilities requiring efficient assembly operations. Perfect for operations producing large quantities of corrugated boxes. Suitable for facilities requiring fast turnaround times with consistent quality output.
